

Networking Installation

Networking improves many aspects of your business including communication, data transfer and storage. Having a network can streamline your business by consolidating the use of computers, printers and other peripherals. Apart from the productivity benefits, it is much easier to keep networked computer safe from viruses, spyware and hackers.

We can install a wired or wireless network depending on your requirements and certain technical constraints. A site survey will be carried out where the pros and cons of each type of network will be discussed.

PC or Peripheral Installation & Upgrade

This is an on-site service that covers the setting up and configuration of PCs and peripherals. It also covers the integration of each device into an existing network or it can be used in conjunction with the Networking Installation service.

We can also upgrade your existing PCs e.g. RAM (memory), a hard drive, a network card, a DVDewriter.

Support & Training

We provide hardware and software support and repairs for your computers and servers. This can be on a call-out basis or as part of a support contract. This includes healthchecks, virus and spyware removal and prevention, data backup and migration.

MGC Computing Solutions - Installation and Support
